

Task

- What conclusions can you programmatically derive based on this data?
 - Write code in any language to parse this data and detect interesting trend changes
 - Across multiple data centers
 - Across time
 - Report results in as much relevant details as can you think
- Extra
 - How can you represent your conclusions visually?

Deliverable

- github repo with your code
- Run instructions. How should we run your code?
- Brief write up on assumptions you have made when solving the problem.
 - What were your findings?
 - What were the challenges?
 - What information you hoped would be there, but wasn't
